

Sovereign SASE is a new way to deploy the VersaONE Universal SASE platform for customers who don't want to use public clouds and shared infrastructures.

# Sovereign SASE is:

- Air-gapped
- Deployed on the customer's own infrastructure
- 100% controlled by the customer

## **VersaONE Universal SASE Deployment Models**

Delivered as a shared SaaS offering

A dedicated instance on Versa infrastructure

#### Sovereign

Versa SASE deployed on your infrastructure

# Who is Sovereign SASE for?

For those who don't want to deploy in public clouds and shared instances like:

### **Large Enterprises**

"I have to comply with various global data regulations and privacy mandates. I need to control my data flow and data residency myself."

### Governments

shared infrastructure. I need to be completely air-gapped from the public internet and clouds."

#### Service Providers / Telcos

"I need customization for service differentiation. I also own existing infrastructure I want to use; I don't want to just resell someone else's cloud service."

# What are the benefits?

Maintain data

residency

Customization

and control

Secure Al

Reduce public

cloud dependency

Leverage existing infrastructure
