

Lumen & Versa: Best-in-breed SASE technology combined with the strongest internet infrastructure in the world.

Managed services, cutting-edge security, and high-performance based on a single backbone.

The requirement for a high-performance network

Companies and employees don't work the way they did a decade ago. As organisations seek to enhance efficiency and better serve customers and staff, legacy networking inhibits scale, impacts performance, and undermines modernisation.

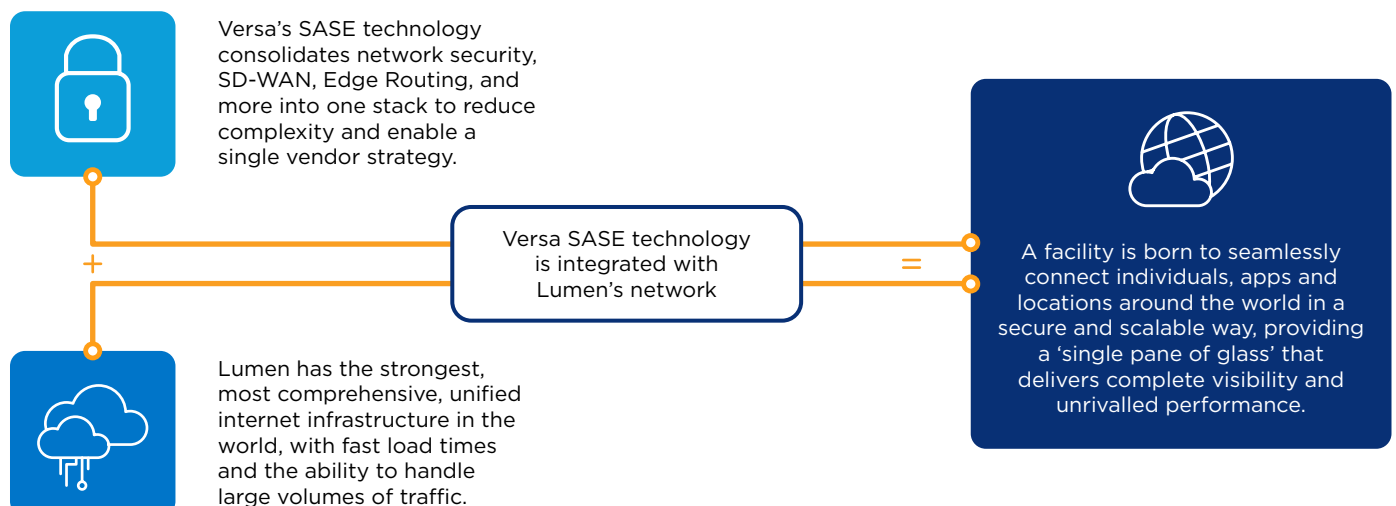

For organisations operating across multiple locations with increasingly mobile workforces, digital transformation isn't complete until their networks have transformed. They must be capable of handling a modern application landscape while enhancing and securing new flexible ways of working.

A comprehensive and global networking and security solution

Lumen SASE with Versa provides a secure, comprehensive, global networking and security solution designed to meet the rising demands of modern applications, users, and businesses.

With best-in-breed SASE technology integrated with cutting-edge connectivity underlay from the world's fastest platform for next-gen apps and data, the results are phenomenal. These include reduced cybersecurity risk, consistent user-app experience when connecting remotely or on-premises, and a reduction in costs by reducing complexity and sprawl.

How this is achieved:

Lumen SASE with Versa

Consolidates functions and rids organisations of the cost and complexity of maintaining several technology landscapes, integrating a comprehensive set of services

Delivers complete visibility and performance not possible with a multi-vendor approach, providing real-time and historical visibility, baselining, correlation, prediction and closed-loop feedback of your network

Provides the largest and most peered network in the world with a flat continuous architecture and unrivalled transport quality for public and private data.

Collaborates to transform network performance and extend the reach of SASE, delivering high-performance, application aware intelligent routing to guarantee performance at scale.

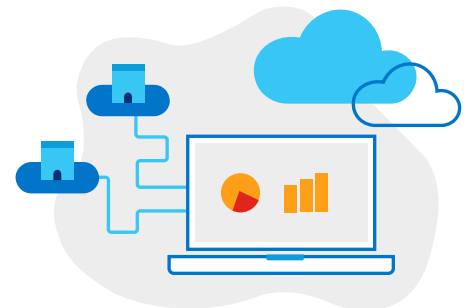

Technical features and capabilities

- SD-WAN hosted infrastructure, software licenses and rental customer premises equipment (CPE) options supporting up to 10 Gbps.
- Lumen connectivity or bring-your-own-transport—MPLS, Ethernet, dedicated internet, broadband, 4G/LTE.
- Management flexibility with fully managed and co-managed options; 24/7 customer self-service portal access for agile co-management.
- Automatic, customer and pre-defined identification for over 3,100 applications for policy-based control.
- Authentication, key exchange and encryption
- Stateful firewall and Geo-IP based firewall rules include content filtering, URL filtering, IP filtering and IDS/IPS
