

Versa Private SASE

Introduction

Versa Private SASE is a solution that delivers integrated network and security capabilities in your own private instance. It enables a flexible deployment on either your own infrastructure or with a dedicated instance from Versa. And with optional Versa-managed options, Versa operational expertise can serve as an extension of your team.

It is designed to address the needs of organizations that include Tier 1 service providers, large enterprises, and national defense organizations to meet data residency and privacy regulations. And foundationally, it enables the use of existing investments in infrastructure and connectivity.

Versa Private SASE Highlights

Meet Data Sovereignty and Compliance Requirements

Versa Private SASE offers enhanced compliance with data residency and privacy regulations. Organizations can ensure that their data remains within defined geographical boundaries, adhering to specific standards that include PCI, HIPAA, GDPR, and federal regulations.

Leverage Existing Infrastructure

Versa Private SASE enables your infrastructure and security teams to leverage existing network infrastructure, including data center appliances and connections necessary for delivering SASE services. This not only reduces the need for additional investments but also minimizes complexity and streamlines the management process, leading to cost efficiencies and a more integrated network security approach.

Scale and Customize a SASE footprint that aligns with your business footprint

Your facilities are often optimized to the location of your business needs. Leverage these facilities or footprint to host SASE gateway. Use your own underlay to connect these gateways to build your own middle mile? With Private SASE, you can do all this and more.

Service Providers get New Revenue Opportunities.

For service providers, Versa Private SASE aligns infrastructure use with business models. This flexibility includes the ability to adopt user-based or bandwidth-based pricing, and capitalizing on economies of scale. For service providers offering commercial SASE services, this model allows for more control over your business and pricing strategies, customized services while adapting as necessary to market demands and customer needs.

Versa Networks' Approach

By offering both shared and private SASE solutions, Versa empowers your team to select the option that best aligns with your operational needs and strategic goals. This approach ensures that you aren't constrained by a one-size-fits-all solution but are equipped with the right tools and infrastructure to thrive in an increasingly complex and evolving digital environment.

Licensing

Versa offers two flexible private SASE licensing options, enabling clients to select between an as a service and self-hosted option. This enables businesses with the flexibility to tailor their network security solutions to fit their specific operational demands and pre-existing infrastructure investments.
